REACT APPLICATION TO-DO LIST

- Excited to share my recent project in React! Today, I built a To-Do List application, adding some cool features to enhance functionality and user experience:

 - ← Priority Filter: Easily filter tasks by their priority level for quick access.
 - ← Custom Backgrounds: Different backgrounds for each priority level make tasks more distinguishable.
 - ← Task Counter: Keep track of the total number of tasks at a glance.
 - ─ Task Management: Edit, remove individual tasks, or clear all tasks in a single click.

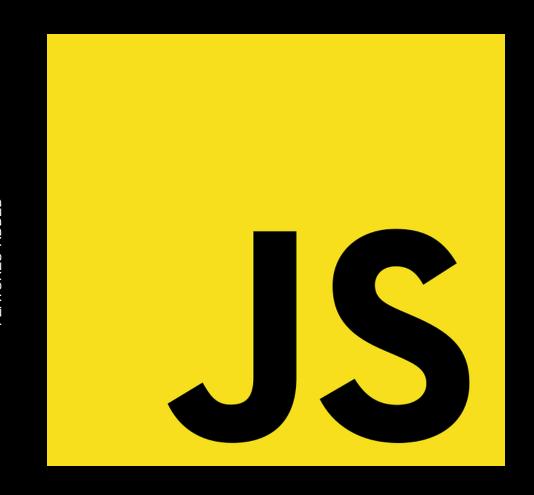

Loving the journey of learning React and bringing ideas to life!

VANILLA JAVASCRIPT: CALCULATOR

VANILLA JAVASCRIPT: CALCULATOR

○ ★ Excited to share my recent project! I built a simple Calculator using HTML, CSS, and Vanilla JavaScript, styled with the Dracula theme. This project helped me dive deeper into core web development concepts and UI design. Loving the journey of learning and bringing ideas to life!
